1. Theoretical and Applied Issues—This section contains articles that address theoretical issues in the field of international business, as well as articles that apply theory to practice. The section is divided into two sub-sections: *Theoretical Issues* and *Applied Issues*. The *Theoretical Issues* sub-section contains articles that address theoretical issues in the field of international business, while the *Applied Issues* sub-section contains articles that apply theory to practice.

approximately 1000, 100,000, and 1 million tonnes, respectively, depending on the size of the oil spill. The maximum oil spill capacity of the oil tanker is 100,000 tonnes. The maximum oil spill capacity of the oil tanker is 100,000 tonnes. The maximum oil spill capacity of the oil tanker is 100,000 tonnes.

1. **Response Spectrum Type**—continuous spectra analysis is recommended for structures in which the response is expected to be nonlinear. For structures in which the response is expected to be linear, the response spectrum type may be selected as either "Equivalent" or "Linear." The "Equivalent" response spectrum type is based on the assumption that the response is nonlinear. The "Linear" response spectrum type is based on the assumption that the response is linear. The "Equivalent" response spectrum type is recommended for structures in which the response is expected to be nonlinear. The "Linear" response spectrum type is recommended for structures in which the response is expected to be linear.

Abstract Despite the existence, over the past 100 years, of a large number of studies on the effects of exercise on mental health, there is still a need for evidence-based practice guidelines for mental health professionals. This paper reviews the literature on the effects of exercise on mental health, with a focus on the effects of exercise on depression and anxiety. The paper also discusses the implications of the findings for mental health professionals and for the development of evidence-based practice guidelines.

Table 1

1. **Introduction:** The purpose of this study is to investigate the impact of social media on the mental health of young adults. The study aims to explore the relationship between social media usage and various mental health outcomes, including anxiety, depression, and self-esteem.

As the new millennium dawns, 2000, and the 21st century begins, there are many things that business leaders can do to ensure that their organizations are successful in the new millennium. The following are some suggestions:

Abstract

...the fact that the *in vitro* and *in vivo* results are in good agreement. The *in vitro* results are in good agreement with the *in vivo* results, which is a good indication that the model is valid. The model is valid for the range of conditions studied, and the results are in good agreement with the *in vivo* results. The model is valid for the range of conditions studied, and the results are in good agreement with the *in vivo* results.

It is important to note that the results of this study are based on a cross-sectional design. Therefore, the causal relationships between the variables cannot be definitively established. Future research should employ longitudinal designs to investigate the temporal relationships between the variables and to assess the sustainability of the observed effects.

Keywords: child sexual abuse; disclosure; social support; self-esteem
